

FrostCart — Easter Egg Interaction Specification

Strict 5-click logo trigger, animation timeline, accessibility rules, and boundary cases.

Purpose

Implement the 5-click FrostCart logo easter egg as a small, polished reward. It must never interfere with normal navigation, accessibility, mobile use, or performance.

1. Trigger contract

- Count consecutive logo activations only when the user intentionally clicks/taps the logo.
- Trigger on exactly the 5th activation within a 2.5 second rolling window.
- Reset the counter to 0 after 2.5 seconds of inactivity.
- Do not trigger on keyboard focus alone.
- After triggering, reset the counter so another deliberate sequence can activate it again.
- On mobile, count taps on the logo; do not require a mouse.

2. Animation sequence

Time	State	Motion
0-120 ms	Logo feedback	Tiny scale 0.98 on each click/tap.
0-250 ms	Freezer appears	Centered modal/panel fades from 0→1 and scales 0.96→1.
250-650 ms	Freezer door	Door/panel slides open using transform; opacity unchanged.
450-900 ms	Cold reveal	Soft ice particles or a subtle frosty glow appears; no particle overload.
650-1100 ms	Message	'❄ Freezer unlocked.' fades/slides upward 8 px.
1100-2200 ms	Hold	Keep result visible so user can read it.
2200-2700 ms	Exit	Fade out and remove from DOM after transition.

3. Visual design

Item	Specification
Overlay	rgba(16,42,67,0.28) max; do not make the page unreadable.
Freezer panel	White surface, 24 px radius, subtle shadow, 320-420 px desktop width.
Mobile panel	Calc(100vw - 32px), max 360 px.
Headline	20 px, 700 weight.

Item	Specification
Message	16 px, 500–600 weight.
Icon	❏ or simple custom ice icon; 28–40 px.
Close	Visible X button, 44 × 44 px target.

4. Boundary cases

- User clicks 1–4 times: no modal; normal logo navigation remains intact.
- User clicks slowly: sequence resets after 2.5 seconds; no accidental activation.
- User double-clicks: count each intentional click; do not use browser double-click events.
- User navigates away before 5 clicks: clear the counter.
- User activates while modal is already open: ignore additional triggers.
- User presses Escape: close the easter egg immediately.
- User clicks outside the panel: close the easter egg.
- User uses keyboard: logo remains a normal accessible link/button; easter egg is optional and must not block keyboard navigation.
- prefers-reduced-motion: show a short fade or instant state change; no sliding particles.
- Very small screens: panel must fit without horizontal scroll and without covering the entire viewport with unreadable content.
- Slow device: animation must remain transform/opacity based and should not cause layout shift.
- Rapid repeated triggers: debounce/lock the trigger while the animation is active.

5. Failure-proof implementation rules

- Keep click-count state local to the logo/easter-egg component.
- Use a timer ref for the 2.5 second reset and clear it on unmount.
- Use a second lock/state to prevent multiple modals during the same animation.
- Do not persist the easter egg in localStorage unless there is a real product reason.
- Do not depend on network requests, images, APIs or external assets for the animation.
- Ensure the normal logo action still works. The easter egg must be additive, never destructive.

6. Recommended interaction copy

❏ Freezer unlocked.
You found the cold side of FrostCart.

[Keep shopping]

7. Quality checklist

- Works with mouse and touch.
- Does not break logo navigation.
- Does not trigger accidentally.
- Has Escape/outside-click close.
- Works at 390 px.
- Works with reduced motion.
- Has no horizontal scroll.
- Does not add a second competing CTA.

- Animation feels like part of FrostCart rather than a generic AI effect.
