

FrostCart — UI Design System & Homepage Blueprint

Strict visual/UX specification for a 3-hour premium homepage submission.

Purpose

This document is the source of truth for FrostCart’s visual language and homepage UX. Follow the exact values unless a responsive rule below requires adaptation. The goal is familiar e-commerce behavior with a distinctive frozen-food identity.

1. Brand identity

Brand: FrostCart
Positioning: Every frozen favorite. One place.
Primary action: Explore frozen food / Add to cart.
Core differentiator: discover and compare frozen products across brands.
Signature interaction: build-your-freezer interaction plus a 5-click logo easter egg.

2. Color system

Token	Value	Use
Primary / Frost Blue	#1677FF	Primary CTA, active states, links, focused controls
Deep Navy	#102A43	Headings, logo text, strong contrast
Page Background	#F7FAFC	Main page background
Surface	#FFFFFF	Cards, nav, modal, cart drawer
Ice Tint	#EAF4FF	Hero accents, selected states, subtle backgrounds
Text	#17212B	Body text
Muted	#5B6775	Secondary text, metadata
Border	#D9E2EC	Dividers, card outlines
Success	#18A66A	Added/available/success
Danger	#D64545	Errors/destructive actions

Rules: use Deep Navy for headings and primary brand text; use Frost Blue sparingly as the action color; never use light blue text on white for body copy; do not use gradients unless they are extremely subtle and do not reduce contrast.

3. Typography

Element	Font	Size desktop	Size mobile	Weight
Hero headline	Inter / system sans	56 px	38 px	700
Section heading	Inter / system sans	32 px	26 px	700
Card title	Inter / system sans	16 px	15 px	600

Element	Font	Size desktop	Size mobile	Weight
Body	Inter / system sans	16 px	15 px	400
Small metadata	Inter / system sans	13 px	12 px	400
Button	Inter / system sans	15 px	14 px	600
Price	Inter / system sans	18 px	16 px	700
Nav	Inter / system sans	14 px	14 px	500

Preferred font: Inter. If unavailable, use a system sans stack. Avoid decorative fonts. Use bold for hierarchy, not for entire paragraphs. Line-height: 1.05–1.15 for hero headlines; 1.45–1.6 for body; 1.2–1.3 for UI labels.

4. Layout and spacing

- Desktop max content width: 1200 px; center it with auto margins.
- Page side padding: 32 px desktop, 20 px tablet, 16 px mobile.
- Use an 8 px spacing system: 8, 16, 24, 32, 40, 48, 64, 80.
- Cards: 16 px radius. Buttons: 10–12 px radius. Large hero/product containers: 24 px radius.
- Do not place more than one dominant CTA in a visual block.
- Maintain generous whitespace; do not fill empty space with decorative cards.

5. Homepage information architecture

Order	Section	Job
1	Header	Orient user; expose search, account and cart.
2	Hero + search	Explain product in 3 seconds and provide immediate discovery.
3	Category chips	Support recognition instead of requiring memory.
4	Featured/trending products	Show the actual product experience.
5	Compare across brands	Express FrostCart's differentiator.
6	Build your freezer	Signature interaction; delightful but useful.
7	How it works	Reduce uncertainty in 3 short steps.
8	Final CTA	Give a clear next action.
9	Footer	Secondary navigation and trust information.

6. Header rules

- Logo left; Browse/Brands/Deals center-left; search prominent; cart and account on the right.
- Cart must remain in a predictable top-right location on desktop. On mobile keep cart visible in the top bar.
- Cart badge shows item count. Hide the badge only when count is zero.
- Search field must have a visible label/placeholder and keyboard focus state.
- Do not hide primary navigation behind a hamburger on desktop.

7. Hero copy and visual

Headline: Every frozen favorite. One place.

Support: Discover and compare frozen food from brands you already love.

Primary CTA: Explore frozen food.

Search prompt: What's going in your freezer today?

The hero should show a believable product UI (search + categories + product cards), not a generic stock photo. If product data is mock/demo data, label it as sample/demo where appropriate. Never invent partnerships, user counts, reviews, delivery promises, discounts, or real-time inventory.

8. Motion rules

- Default duration: 160–220 ms for micro-interactions; 280–420 ms for larger panel/drawer transitions.
- Use ease-out for entering elements and ease-in-out for state changes.
- Animate transform and opacity, not layout-heavy properties.
- Hover: product card translateY(-2 px) and subtle shadow increase; never make the card jump.
- Button press: scale to 0.98 for about 100 ms, then return.
- Respect prefers-reduced-motion: disable non-essential movement and use opacity/state changes only.

9. Product card rules

- Show recognizable product image, brand, product name, pack size, price and Add button.
- Keep Add button directly on the card. Do not force a product-page visit for a simple add.
- Use one primary price. If showing an old price, use it only when a genuine comparison price exists.
- Long product names: clamp to 2 lines; never allow card heights to become inconsistent.
- Missing image: use a neutral FrostCart placeholder, never a broken image icon.
- Unavailable item: disable Add and show 'Currently unavailable'; do not hide the item if the user is browsing it.

10. Responsive breakpoints

Viewport	Rules
1440 px	4-column product grids; full nav; max content 1200 px.
1024-1199	3-column grid; preserve full nav if it fits.
768-1023	2-column grid; reduce hero type and spacing.
390 px target	2-column product grid only if cards remain usable; otherwise 1-column. No horizontal scroll.
<360 px	1-column products; compact nav; maintain 44 px minimum touch targets.

11. Accessibility and psychological usability

- Minimum touch target: 44 × 44 px for interactive controls.
- Keyboard focus must be visible with a 2 px Frost Blue outline and sufficient contrast.
- Do not rely on color alone to communicate success, error, selection or availability.
- Maintain readable contrast; body text should not use muted gray at the expense of legibility.
- Use real button elements for actions and labels/ARIA where icons are not self-explanatory.
- Preserve familiar conventions: logo → home, search → discovery, cart → purchase, profile → account.
- Reduce cognitive load by grouping related controls and showing progressive disclosure rather than every option at once.

12. Strict boundaries

- Homepage only. Do not expand into a full marketplace unless time remains after the homepage is polished.
- No fake testimonials, fake logos, fake user counts, fake ratings, fake partnerships or fake scarcity.
- No random gradients, excessive glassmorphism, excessive shadows, or animation without a product reason.
- No horizontal scrolling at 390 px or 1440 px.
- Do not change familiar cart/search/account placement merely to appear original.
- Do not use a decorative animation that competes with the primary CTA.
- Do not claim live delivery, live stock, real-time prices or real brand relationships unless the demo actually provides them.
